

# Aztek's Azure FinOps SERVICE CATALOG

Aztek's Azure experts provide organizations with a premium cloud budget management service – also known as **FinOps** – that optimizes, monitors and improves their cloud consumption on an ongoing basis.

Aztek's Azure FinOps provides cloud budget peace-of-mind and much more. It is a comprehensive service that makes sure that your users get the most out of your Azure cloud platform, in the most cost-effective way possible, while also keeping track of all potential budget deviations and alerting to any discrepancies that may occur.

Our experts use advanced monitoring tools to track your cloud services on a daily basis and ensure that they are optimally managed, in accordance with your budget requirements and organizational needs – with no surprises whatsoever.

Here's a detailed list of

## LICENSE & SUBSCRIPTION

This first step allows Aztek to begin implementing its FinOps service for the designated customer. Aztek connects the customer's system and begins the data extraction process, in accordance with the customer's cloud ID.

## ONGOING MANAGEMENT

### Daily Cloud Cost Recommendations Implementation

- ✓ Aztek's FinOps service provides the customer with recommendations for cloud budget management optimization, on a daily basis. These recommendations are effectively implemented by the Aztek team.

### Cloud Cost Optimization Recommendations Review & Scripts Recommendations

- ✓ Along with the daily recommendations, Aztek provides the customer with recommendations for continuous cost optimization. These recommendations are based on a wide range of changing parameters. The system generates an implementation script for every recommendation.
- ✓ Aztek's account manager regularly reviews all recommendations and decides on their implementation after consulting with the customer. Implementation of cost optimization scripts is conducted by the customer.

### Cloud Anomaly Detection Alerts

- ✓ In addition to all recommendations, Aztek regularly monitors budget and spending anomalies, in order to alert the customer on sudden changes in service terms, cost spikes, behaviors, etc. These alerts allow the customer to impose necessary measures that will ultimately prevent significant budget overspending.

### Overspending/Spikes Configuration Alerts

- ✓ Once the organization is expected to overspend in accordance with its current predefined budget limit for a specific service or user, Aztek experts will send an instant alert. This alert prevents the customer from deviating from the budget plan.

## REPORTS

Aztek defines the FinOps reports that the client benefits from, which can be displayed via subscription, resource group, or service categories- or per certain financial categories.

The reports are defined by Aztek via the organization's needs and generated by a report system portal. Aztek defines the contents, frequency and recipients for every report type.

In addition to the basic personalizes reports package, the customer receives three on-demand reports on a monthly basis. Furthermore, the customer can easily access the system at any time and generate a wide range of additional reports, in accordance with its dynamic needs and without Aztek's assistance.

## FOLLOW-UP & STATUS

### Weekly follow-up and notifications for budget owners on alerts

- ✓ **Weekly follow-up via email/conversation.** During the weekly follow-up, Aztek reviews all recommendations and examines the customer's actions. In case the Aztek team notices that certain recommendations were partially addressed or not addressed at all, it will bring this to the customer's attention.

### Monthly status review with Customer Cloud Manager and his team

- ✓ Every month, Aztek's Customer Cloud Manager and his team conduct a thorough review of all service components and benefits. This is followed by a discussion with the customer, in order to refine and recalibrate the service for the months ahead.
